

# Resilient Connecticut 2.0 Phase II

## Regional Adaptation/Resilience Opportunity Areas

Name: High Street Pump Station

Location: Glastonbury

Consideration	Characteristics of Area				
Flood Vulnerability	●	●			
Heat Vulnerability	●	●			
Social Vulnerability	●				

The High Street Pump Station is located in close proximity to Roaring Brook. Unlike some of the larger ROARs identified through the Resilient Connecticut program, this site was selected because an individual critical facility is located in a flood zone, in this case the 1% annual chance flood zone of Roaring Brook. The primary vulnerability associated with this ROAR is flood-related, as the larger area has low to moderate heat and social vulnerability.
